SUPERFUND DIV.
REMEDIAL BRANCH
(6SF-R)

Dear Gary,

Thank you for taking the time to take feedback and input from the community. We appreciate being able to share our concerns with you. One that you may not have heard is that while we are in the immediate area affected by the contamination from the San Jacinto waste pits, one of the remediation options available could further extend that affected area to other communities down river by digging up the pits and disturbing that water. As that water flows into other areas it can carry contaminants, making otherwise safe waters now unsafe. This would be irresponsible at best and unconscionable at worst. A permanent cap would mean that everyone is protected from further contamination. Please consider this when making your decision. Thank you.

Sincerely,

(b) (6)
